

The Warwick School

Annual Lecture : 2009

Whodunnit ? Modern Forensics

The ability to detect the culprits of crime has been a problem that has exercised human ingenuity since the dawn of time, or certainly since the time of Cain and Abel. In this talk you will see how modern forensics is all about applied chemistry. The talk by Professor Dave Povey and colleagues from the University of Surrey will be a triple act covering explosives, ballistics (lots of flashes and loud bangs) and the ultimate tool of the forensic scientist, DNA profiling.

TUESDAY 1st DECEMBER

**AT THE WARWICK SCHOOL, NOKE DRIVE, REDHILL, RH1 4AD
TALK BEGINS AT 7:30 P.M.**

LIGHT REFRESHMENTS AVAILABLE, LIMITED PARKING ON-SITE

This event is free and will be of interest to all ages from primary school student to adult. Everyone is welcome. No need to book, please just turn up.

It is organised as part of our programme of ongoing development and improvement including committing to sharing our Specialist Schools expertise and facilities and being part of a local learning community. This year-round programme extends to organising and running special learning events for students, their parents and staff at other secondary schools, at primary schools and for adults within the community.
